

# DISASTER RECOVERY & CLOUD BACKUP

**When is a disaster not a disaster? When you have an Enreach disaster recovery plan.**

We're all about making amazing things happen for your business – but any disaster involving IT downtime can damage productivity, reputation and finances, and a major problem means some businesses never fully recover.

**That's why our rigorous disaster recovery plans are so critical to ensuring business continuity.**

If the worst were to happen, we've got your back: our disaster recovery solutions protect and restore your systems, making them accessible again within hours - or even minutes.

contact that works wonders

**With our data and cloud backup solutions you can protect your servers, email exchange, virtual platforms, desktops, laptops and mobile devices, with support plans available for businesses of any size.**

We'll also give you cost certainty through our fixed monthly pricing plans, so you only ever pay for the storage that your business really needs.

- ✔ Recover your system in minutes
- ✔ Superior data protection
- ✔ Protect all data, applications and your operating system
- ✔ Straightforward pay monthly pricing
- ✔ UK-based customer support
- ✔ Eliminates human error

## CHOOSING THE RIGHT DISASTER RECOVERY SOLUTION FOR YOUR BUSINESS

This is a balance between cost and the amount of time that you are happy for the recovery process to take:

### Virtual Business Continuity (VBC) – recovery in minutes

This is the gold standard in disaster recovery. Your business's environment (physical or virtual) is continuously streamed to our data centre in real time. Your system can be restored within minutes with a live virtual copy of your business' machines, systems and infrastructures. VBC offers all the benefits of a co-located solution, but without the price that comes with using physical hardware.

### Virtual Disaster Recovery (VDR) – recovery in hours

We back up your environment (physical or virtual) at least once a day. This means your business can replicate its data, applications and operating system, so in the event of a disaster, our team can launch a copy of your environment and have you back up and running within hours.

### Cloud Backup – storage only

Our cloud backup solutions include the daily backup of your business's data and infrastructure in our data centres. This is storage only, not a disaster recovery plan, so recovery could take days and any work recovering your data is chargeable.

### Fully Managed Disaster – recovery plan

With a fixed monthly cost per person, we cover all your IT support, including remote and on-site work. We can manage your IT systems in their entirety or collaborate with your internal team.
